

VIMTA Cybersecurity Policy

The Vimta policy on cybersecurity is to establish a comprehensive, organization-wide Cybersecurity Management Program designed to safeguard the confidentiality, integrity, and availability of information systems and data assets. To take proactive measures for identifying and mitigating threats, ensuring continuous audit readiness, and deploying a formal Incident Response Plan to promptly detect, contain, and recover from security incidents and effectively manage cybersecurity incidents. This policy applies to all employees, contractors, systems, applications, and third-party services that handle organizational data and to all data and information of whatever nature that may be generated, stored, processed, archived or used for further actions irrespective of whether the data belongs to individual, customers, contractors, vendors or associates of Vimta
